

Earth has been generous to man from the very start, providing resources and raw material that make a difference to the quality of life he leads. The raw material available and the creativity of the human mind paved the way for various applications. We too in Jordan have been blessed with a valuable gift, silica sand, which is found in the southern parts of the kingdom in huge quantities and excellent quantity.

International silica industries company, ISIC

All about Us

Our company is established with a mission, we aim at becoming Jordan's number one supplier of high quality silica sand. We currently extract, upgrade and micronized the sand to meet the needs of different industries.

ISIC is a public share holding company, with a capital of US (\$3.434) million. Our plant holds the capacity of 28.000 tons/annum of micronized and classified silica sand.

ISIC obtained a mining concession for a mining area south of kingdom selected after intensive research that proved the deposit is of high quality. The quarry supplies the current plant as well as holding the capacity to supply the future projects of ISIC.

Our mission is to establish ISIC as the leading regional silica sand mining and processing company, by providing a strong marketplace presence to meet the growing demand of customers in the local and international industries alike.

Silica an Essential Ingredient in Everyday Life.

Being a basic raw material in various industries, our product finds its way into many applications, which shape our daily life, to name but a few:

ceramics, glass, fiberglass, construction chemicals, foundries, filler materials, paints, mortar, GRC, chemical industries, adhesives and many others life can't do without.

Our operations Innovation team advanced technology

ISIC is well equipped with a young team of engineers, technicians and specialized professionals geared with an experienced management that has an eye for development and growth. Our company commits itself to its clients through product innovation and enhancement, professional customer service and future developments and expansions.

The combination of human resources and the employment of the latest technological development in the production process are the path ISIC adopts/ the operation includes mining the sand from the quarry, screening, drying, grinding and classifying. The system available insures accurate cut by air classification.

Our products helping the industry perform at its best

We currently produce four different grades of micronized silica flour:

10 microns

25 microns

45 microns

63 microns

75 microns

100 microns

As well as providing several other sizes ranges of silica sand for different end users.

Our future outlook Determination to create, develop and grow

In a world tomorrow is on our doorstep, international silica Industries Company continues to provide premium product quality and superior services, which will remain the top priority of our existence.
